P R E F A C E

The object of this publication is to make available to the general public in a handy form the more important statistical data in the field of Agriculture properly co-related to each other and set against the perspective of world conditions. An abstract by its very nature involves a certain amount of selection and consequent leaving out of material which might be considered important by some. Any suggestions therefore for making the abstract more complete and self-contained will be most welcome and they will be given effect to as much as possible in the next edition.

Since the completion of the Abstract, the events in Kashmir and Hyderabad have created a need for inclusion of relevant statistical data pertaining to these States. These have been incorporated in a Supplement which also includes more recent data in respect of the entire Indian Union.

The detailed work involved in the preparation of this publication was done by the Development Branch of the Directorate of Economics and Statistics under the supervision of Shri. J. S. Sarma.

The manuscript of the Abstract was sent to the press in April 1948. Publication has however been delayed considerably due to printing bottlenecks.

EXPLANATORY NOTES

The Agricultural Statistics presented in the main body of the Abstract relate to the Indian Provinces acceding Indian States and the figures for India represent their totals. Data of a general character relating to the Indian Union, excluding Hyderabad and Kashmir are given in Part I, Summary Tables. The Supplement given at the end contains figures for the States of Hyderabad and Kashmir and more recent information relating to Indian Union as a whole while all the necessary data relating to each province of the country are included in Part II, Provincial Tables. The statistics relate generally to the period 1936-37 to 1945-46.

The procedure adopted in arriving at the estimates :— the partitioned provinces of the Indian Union (upto 1946-47 only) is given below:—

(i) East Punjab.

Classification of Area:—The area under each head of classification in East Punjab has been estimated by adding up the district-wise areas supplied by the Provincial Government, for each of the years 1936-37 to 1942-43. For subsequent years for which district-wise figures of classification of Area are not available, the estimates are based on the corresponding pre-war average (1936-37 to 1938-39) ratios.

Irrigated Area:—These figures have been arrived at by adding the district-wise figures of areas under the respective heads reported in the Provincial Season and Crop Reports.

Estimates of area under Crops:—The revised estimates of area under each Crop in Punjab released by the D.C.I. & S. have been divided in the ratio of the total district-wise area for East Punjab to the total area in Punjab as given in the Season and Crop Reports for each year.

Estimates of Production:—The production figures of the important producing districts for which separate figures are given in the Season and Crop Reports and the estimated production in the other districts, based on the acreage and average yield per acre for the non-reported districts have been added to arrive at the ratio which the production of East Punjab bears to the total. The revised estimates of yield released by the D.C.I. and S. Calcutta, have been divided in the same ratio, for each year.

In the case of Gurdaspur and Lahore, where a part has gone to Pakistan and a part to the Indian Union, figures for the sub-divisions where not readily available. Hence for the purposes of these calculations, the tehsil of Shakargarh from the Gurdaspur District which has gone to Pakistan and the Teshil of Kasur which has come to the Indian Union are assumed to balance each other. The figures for the whole of Gurdaspur District have been added to the figures of East Punjab, and the figures for Kasur omitted altogether.

(ii) West Bengal.

Classification of Area:—The district-wise areas under the respective heads of classification for the undivided districts now forming part of West Bengal as given in the Provincial Season and Crop Reports have been added together in the first instance. As for the divided districts of Nadia, Jessore, Dinajpur, Jalpaiguri and Malda, the ratio between the geographical area of the two parts of the districts has been utilized in obtaining the areas for the portions of the districts included in West Bengal. These have been added to the totals of undivided districts.

Irrigated Area.—Estimates of irrigated area according to the different sources of irrigation and under different crops have been obtained as the sum of district-wise figures given in the Season and Crop Reports for the undivided districts and those for the divided districts, reduced in proportion to the geographical area.

Estimates of Area under Crops:—The districtwise areas under the various crops for the undivided districts, as given in the Season and Crop Reports, have been added up in the first instance. For the divided districts, the proportion of the area under the crop in the portion included in West Bengal to the total, has been worked out, utilizing the Thanawise figures under Rice, Wheat, Barley, Gram, Maize, Sugarcane, Jute, Rape and Mustard, Sesamum and Tobacco given in Ishaque's Report "Agricultural Statistics by plot to plot enumeration in Bengal, 1944-45." The acreage figures for these districts have been obtained by dividing the district-wise figures given in the Season and Crop Reports in the same ratio. For other crops, viz. Jowar, Bajra, Linseed and Tea, for which Thanawise figures are not available in the Ishaque's Report, the geographical ratios have been utilised in arriving at the reduced figures for the divided districts. These have been added to the totals of undivided districts to get the figures for West Bengal.

Estimates of production:—The production of crops in West Bengal has been estimated by dividing the revised estimates of D.C.I. & S. for Bengal as a whole in the ratio in which the acreage under the crop is shared between the two parts of Bengal, as calculated above.

In case of Balurghat (Dinajpur) and Lolatpur (Nadia) thanas which have been divided between the two Bengals, the portions of these thanas thus separated have been assumed to have balanced each other and the whole of Balurghat thana has been taken in West Bengal, for purposes of all the calculations mentioned above.

(iii) Assam

The figures of classification of Area, Irrigated Area, Estimates of Area and Production of principal crops for Assam have been obtained by

subtracting 85% of the corresponding figures for the Sylhet district as given in the "Tables of Agricultural Statistics for Assam", from the figures for total Assam before partition, for each year.

(iv) Indian States.

So far as the main body of the abstract is concerned the figures for Indian States relate to the States which have acceded to India.

The figures for Hyderabad which has not acceded to India and those for Kashmir whose accession is provisional have been shown separately.

The Statistics presented herein have been compiled from various sources, official and non-official and are not all of the same accuracy. Statistics of area relating to permanently settled Provinces and Indian States, for instance, are not as reliable as those relating to temporarily settled Provinces. The harvest or wholesale prices quoted do not always refer to the same quality in the different Provinces. Similar discrepancies exist in other cases. The limitations of each item of data need, therefore to be steadily kept in view.

The data have been generally compiled from the relevant portions of the following publications :—

Agricultural Statistics of India Vol. I.

Agricultural Statistics of India Vol. II.

British India Agricultural Statistics (Provisional).

Estimates of Area and Yield of Principal Crops,

Indian Tea Statistics.

Annual Statement of Sea-borne Trade of British India Accounts relating to Sea-borne Trade and Navigation of British India.

Trade Statistics relating to the Maritime States in Kathiawar and the State of Travancore.

Trade at Stations Adjacent to Land Frontier Routes.

Review of Trade of India.

The India Trade Journal.

Marketing Reports on the various commodities published by the Agricultural Marketing Adviser.

In cases where other sources have been resorted to, these have been indicated in the foot notes.

For latest estimates of acreage and yield of principal crops, the reader is referred to a later publication of the Directorate, "Estimates of Area and Yield of Principal Crops in Undivided India, 1936-37 to 1945-46, June 1949)".

Source:—Memoirs of the Indian Meteorological Department Vol. XXII (1913-21).

Note:—The means of the maximum and minimum temperatures have been determined from the whole of the available observations since 1878. In the great majority of cases the normals are derived from the data of the 33 year period 1878-1910. In some of the most recently started observatories the period is shorter, but is never less than five years.

The normals of relative humidity have been deduced from the 8 hrs. records of the period 1889-1910 for the great majority of stations.

No. 9.6 PREVAILING SYSTEMS OF LAND TENURE.

*MADRAS

Category	(Area in million acres)
Raiyatwari area	.. 27.65
Zamindari	.. 12.84
	<hr/>
TOTAL	40.49

*The principal form of tenure is the Raiyatwari-settlement. A special form of tenure (inam) in both Raiyatwari and Zamindari tracts of the Province which may be held either revenue-free or at reduced assessment called a quit-rent. Other forms of tenure such as in Malabar, three district interests in land are recognised and their rights to some extent regulated by law. In East-Godavari district, there are instances of temporarily-settled estates. In South Kanara also a system of Permanent under tenures has developed within the Raiyatwari system.

No. 10.6 PREVAILING SYSTEMS OF LAND TENURE, ORISSA*.

Category	Area (In Million Acres)
1. Permanently settled estates	9.13
2. Revenue-free estates (a)	0.32
3. Temporarily-settled estates	5.18
	<hr/>
	TOTAL 14.63
4. Raiyatwari and Khas Mahal (corresponding to Government estates in Bengal)	5.98
	<hr/>
	GRAND TOTAL 20.61

*Tenures prevailing are similar to those in Bengal, principal form is permanent-settlement.

(a) In the northern districts of this povince with the bifurcation of proprietary and occupancy rights, same type as in Bengal.

*Note:—*Gauntia tenure, a form of tenure-intermediate between Zamindari and the rayotwari. The Gauntia is an agent for the collection of revenue due to Government from settled lands with some land given to him in lieu of remuneration and a right to lease out the waste lands upto next settlement. This prevails in the district of Sambalpur. A considerable area of land in the province is held on produce rent with an equal division of grain and the by-products or a fixed produce by contract.

Note on statistics of Sugar production.

For inclusion of Indian Statistics of sugar production in International Sugar Statistics, the Indian Production of sugar is taken as 60% of gur production given in the "Estimates of Area and Yield". This assumes a 6% recovery of sugar on cane. In actual practice 61% of Indian cane is converted into gur and 17 to 18% of the crop is directly converted into white sugar in vacuum pan factories giving a recovery of 9.5% on cane. More than 97% of the gur produced in India is consumed as such.

(a) Commercial Cotton includes only raw cotton produced for factory consumption and does not include large quantities grown in India and China and to some extent in other countries for consumption on hand spindles or for other use in non-commercial ways. For this reason and because of difference in the methods of determining the quantities involved and differences in bale weights in the case of American the estimates of production of Commercial Cotton do not agree with the estimates of Agricultural crops.

(b) American in running bales (counting round bales or half bales). Foreign in bales of approximately 478 lbs. net.

(c) Excludes Burma (d) Preliminary.

No. 11.52 TECHNICAL TERMS USED IN JUTE TRADE.

Explanation of some technical terms is given below:—

Species:	The various species of jute of which <i>Corchorus Capsularis</i> (White jute) and <i>Corchorus olitorius</i> (Tossa and 'daissee' jute) are the only two of any commercial importance.
Quality:	This term is used by the trade to give a broad indication of the spinning quality of the fibre.
Grade:	This term indicates jute assorted according to commercial standard based on the factors of strength, colour, length and percentage weight of roots.
Standard:	Specification defining characteristics of the fibre of a particular grade which are fixed for loose jute, by the joint committee of I.J.M.A. and the Calcutta jute Dealers Association.
Marks:	Distinctive trade symbols-designs or combination of letters-employed by balers for both kutchha and pucca bales; and usually printed on small squares of hessian affixed to each bale.
Condition:	A general term referring to such characteristics of the fibre as are influenced by the manner in which jute has been cultivated and prepared for the market.
Spinning quality.	This term refers to the suitability of fibre for the production of various types of yarn.
Grade outturn:	The yield of each grade of fibre obtained after assorting.
Colour:	The colour of jute, which varies considerably throughout the growing areas depends to a great extent on the type of water used for retting and the care taken in the process.
Low-colour:	This term is applied to drab brown or dark gray colour which is due to the retting of plants in dirty or brackish water.
High colour:	This means good colour resulting from retting in clean water.
Morah:	A lightly twisted bundle of four to seven seers of fibre. After assorting, jute is made up into morahs Prior to baling.

No. 18.51 QUALITIES AND TYPES OF TOBACCO.

- (a) *Nicotiana Rustica*:—Yellow colour, a more robust and densely growing plant, thick coarse textured leaf, broad, inclined to be rounded at the apex.
- (b) *Nicotiana—Tobacum*:—White or Pink flower, and an elongated, comparatively smooth and generally pointed leaf.
- (c) The multifarious types are known by local names:—Konga madori (Long leaf),
Motu bandu (Thick leaf),
Ane Kivi (Elephants ear)
etc.

99% of the crop grown in North India is *N. Rustica*. This cannot be used for the manufacture of cigarettes etc. and is used for hookah, chewing, snuff, etc.

Quality characteristics:— Strength, burning character, ash and aroma or flavour. In the first instance it is judged on the physical characteristics of the cured leaf, e.g., Colour, texture, size of leaf and freedom from blemish. The darker the colour, the stronger the tobacco and vice versa.

Burning Character:— This must be slow, regular and continuous.

Ash:— should be of a whitish colour in the case of a good cigarette, cheroot and bidi tobaccos.

Cigarette types:—Virginia and Country (Natu or Desi).

Virginia:—Adcock and Horrison Special.

Cigar types:—Pensylvania, Sumatra and Burmese Havana.

Cheroot types:—Jati tobaccos with local names.

Bidi types:—*N. Tobacum* and *N. Rustica*.

Hookha types:—*N. Tobacum*—grouped under-Noki, Kakkar, Ghose, Gidri,

N. Rustica, Calcutiya, Gobhi, Peshawari, Varieties Motihari, Vilayati.

Chewing and Snuff Types:—No special variety.

No. 18.58 CURING,

Curing is the most important operation and it has great bearing on the value of the final product. The producer of V. flue-cured cigarette tobacco, for example, may get 9 annas or more per lb. for well-prepared first grade leaf but only 2 annas for the 5th grade-grading depends on proper curing.

- 4 Principal Methods of curing.
- (1) Flue-curing (2% of the crop)
Expensive.
 - (2) Rack-curing (only 1/4).
 - (3) Ground—(or sun) curing.
 - (4) Pit-curing, nearly 5%.

More than 2/3 of the total crop in India is ground-cured.

(a) The figures as at 31st March of year following that indicated; (b) Figures as at 31st March of the year following that indicated;

(c) The figures of Estates (Java) include "Small Agricultural Estates", amounting to 3,739 acres in 1939. The figures of the native areas upto 1938 are officially stated to be very incomplete, but no other figures are obtainable. There is no record of any native areas outside Java; (d) The figures shown upto 1940, are at the 31st March of the following year; (e) The figures are the areas at 30th June of the year indicated.

Note:—An increase from one year to another must not be taken to represent new planning during the interval. In India and the N. East Indies, in particular, the increases are often mainly due to more complete records of existing areas, so that the figures of different years are not strictly comparable. Furthermore, the areas abandoned have also to be taken into consideration before arriving at the figures for new plantings. The areas shown are the total planted areas and not the areas in bearing or plucked.

No. 19.53 INTERNATIONAL TEA REGULATION SCHEME.

A Scheme for the regulation of exports of tea from India, Ceylon, and the Netherlands East Indies, with the object of achieving and maintaining equilibrium between supply and demand, was inaugurated by the signing of an International Tea Agreement, on 9th February, 1933, by the representatives of the Industry of these three countries. This agreement provided, *inter alia*, for the scheme continuing for a period of five years, starting on 1st April, 1933, and ending on 31st March, 1938 and for the formation of an International Tea Committee to operate and administer the scheme. During the currency of the first arrangements, tea producers in Kenya, Uganda, Tanganyika, Nyasaland and Malaya agreed to support the scheme, strong efforts made to bring the other main tea-producing countries into the scheme were unsuccessful. A second agreement, dated 18th November, 1936, provided for the continuance of the scheme for a further period of five years from 1st April, 1938 to 31st March, 1943. The second agreement was renewed for the duration of hostilities and in the case of India, Ceylon, the Netherlands East Indies and Nyasaland, for two clear quota years thereafter.

In accordance with the terms of the International Agreement, the Governments of the participating countries have passed the necessary internal legislation to make the scheme operate effectively in their territories. The Government of India have passed in 1933 the Indian Tea Control Act and have also implemented the scheme by issuing notifications or establishment of a Tea Licencing Committee empowered to issue export licences and to determine the export quotas of each tea estate for each financial year. The Committee is also empowered to levy certain fees for meeting its expenses. It operates from two centres, one at Calcutta covering the tea gardens of Northern India and another at Coonoor covering the South-Indian estates.

The Indian Overseas Export Allotment of tea
